What is a dissertation?

- An extended paper, often hundreds of pages long, that is required in all PhD programs
- A substantial work that
 - a) a student has had to defend and
 - b) multiple scholars have reviewed and declared accurate and reliable
- The culmination of several years of *original* research, which contributes *new knowledge* within an academic discipline

Dissertations & Theses in Research and Teaching

“There are many types of scholarly content that don’t go through the peer review process, providing researchers with insight into emerging trends (and emerging voices). Popular content types include Dissertations and Theses (used by 73%), working papers (70%) and conference proceedings (69%).”

86% of faculty recommend dissertations for research

73% Using dissertations themselves

86% Recommending them to their students

Why Use Dissertations for Research?

Dissertations are scholarly, reviewed work resulting from comprehensive and original research.

- 1 They test and present new trends and ideas
- 2 They provide more coverage than journal articles — 225 page vs 10-12 pages for journal articles
- 3 They often provide the only research and literature on uncommon topics
- 4 Dissertations include up-to-date literature reviews with extensive bibliographies
- 5 They feature more extensive research data
- 6 They give examples of expected writing style and format
- 7 They uncover recommendations for future research
